

AZWipe Spiral Brushes

Description

AZWipes offer a better way of removing excess scale, rust or coatings on rod and wire. The unique helical design permits easy "screw on" installation and removal. Used correctly, they can help reduce lubricant usage, cleaners and acids.

Applications

AZWipes are usually installed in front of the ripper box, but with a variety of brush types and depending on the customer requirements, can be installed almost anywhere; within the die line-up, on a cleaning line, before or after a furnace or before a welder.

Operating Parameters

AZWipes are easily cut to 3 to 4-inch lengths, depending on the amount of scale, rust, lube residual or coating that needs to be removed. You will get better cleaning with two 4-inch lengths than with one longer length.

Properties

Options

AZWipe spiral brushes are available in 39-inch lengths in these configurations

- 1 1/2" brass coated / 2 1/4" brass coated / 3" brass coated
- 1 1/2" poly / 2 1/4" poly
