

## Welding Wire Products

### EZDraw V33

Is a special blend of low viscosity oils that is formulated for use on mild deforming, packaging and feed operations, leaving a very light lubricant film, which also aids in welding. EZDraw V33 is non-reactive to all metals and will evaporate leaving a very clean and dry wire surface.

### EZDraw 211 G/M

Is a low titer, rich, soluble mix of sodium and potassium soaps. Leaves a tight – clean residual, with the option of adding graphite or moly to give you a dark, slick finish. It is manufactured under controlled conditions that ensure product uniformity and low moisture.

### EZDraw 320

Is a free flowing lubricant formulated with specialized fatty acids reacted with soluble alkalis. It is an extremely versatile, high performance lubricant, suitable for a wide variety of welding wire applications using high speed equipment. EZDraw 320 is manufactured under controlled conditions to assure chemical uniformity and moisture content.

### EZCoat IHCM / EZCoat IHCR

Are additives for immersion copper sulfate solutions where superior tank life is important to minimize dumping and interruption of continuous coating operations. These products will improve stability at high iron concentrations and the bath may be operated continuously for long periods with consistent coatings.

### EZDraw 701G

Is a calcium stearate based lubricant that contains extreme pressure (E.P.) additives, organic viscosity improvers and other lubricity agents. This combination of ingredients provides exceptional lubricating properties and leaves a homogeneous residual on the drawn wire commonly used for stick applications.

### EZDraw DL90

Is a water-soluble semi-synthetic lubricant, specifically designed for the wet drawing of uncoated, copper, phosphate, brass, bronze, and zinc coated steel wires. It has a special formulation that exhibits excellent die life, clean running machinery, and even with stands a high level of metallic dusts, and calcium soap contamination.
